

# Mission-Ready Services Overview

## Trusted Expertise When Communication Is Critical

Mission success depends on trusted people, proven expertise, and technology that performs under pressure. CIS Secure delivers mission-ready services and solutions to the Department of War (DoW), Intelligence Community, and Federal agencies operating in complex, contested, and high-risk environments.

Our teams are embedded alongside customers, providing on-site subject matter expertise, operational support, and technical advisory services at critical decision points. With decades of real-world experience, deep technical credentials, and a culture rooted in service, CIS Secure helps customers solve hard problems, adapt to evolving threats, and maintain operational advantage when it matters most.

## CORE SERVICE AREAS

### Electronic Warfare and Electromagnetic Spectrum Operations

CIS Secure provides the expertise and technology required to control, disrupt, and protect communications and sensing systems across the electromagnetic spectrum. Our teams design, develop, implement, and operate EW capabilities while ensuring electromagnetic compatibility. We support mission operations by protecting and, when required, disrupting radios, phones, radar systems, GPS, and other mission-critical systems in contested environments.

### Intelligence and Analysis

CIS Secure supports intelligence-driven operations with experienced analysts and globally dispersed teams. We provide intelligence analysis and operational support across DoW and Intelligence Community missions worldwide, delivering timely threat reporting, exploitation, and vulnerability assessments that inform operational planning and decision-making.

### Enterprise IT, Cyber, and Digital Modernization

We modernize mission-critical IT environments to improve resilience, security, and performance. CIS Secure delivers enterprise IT systems engineering and modernization, network administration, cloud computing, cybersecurity, application development and support, and data management and analytics. Our teams help customers transition legacy systems into secure, scalable, and mission-ready digital environments.

### Science, Engineering, and Technical Advisory (SETA)

CIS Secure provides trusted SETA services that support informed technical, operational, and acquisition decisions. Our capabilities include research and development, systems engineering, model-based systems engineering, equipment design and integration, software engineering, acquisition management, logistics, and test and evaluation across defense and intelligence programs.

### Unmanned and Counter-Unmanned Systems (UxS / C-UxS)

CIS Secure supports the full lifecycle of unmanned and counter-unmanned systems operations. We deliver UxS and C-UxS threat reporting, intelligence analysis, vulnerability assessments, and red teaming, along with piloting, training support, operational planning, simulation prototyping, and mission rehearsal to counter evolving aerial and ground threats.

### Operational and Field Support

Our teams operate where missions happen, delivering continuous support without interruption. CIS Secure provides globally deployed, embedded operational teams with 24/7/365 field service support, enabling rapid response, sustainment, and mission continuity in austere and contested environments.

### Secure Collaboration and Physical Infrastructure

CIS Secure designs, integrates, and sustains secure environments that enable collaboration and operational effectiveness. Our services include audio and visual engineering, system integration, maintenance, and sustainment, as well as physical access control systems, intrusion detection systems, and full lifecycle installation and support.

### Program and Depot Support

We ensure programs remain on track and systems stay mission-ready throughout their lifecycle. CIS Secure delivers project and program management, financial and risk management, quality assurance, configuration and knowledge management, staffing and administrative support, depot-level maintenance and repair, kit furnishing, software and firmware updates, and new equipment sourcing.

## About CIS Secure

CIS Secure is a trusted provider of mission-ready communications, technology, and operational services supporting national security missions worldwide. With a workforce composed largely of veterans and cleared professionals,

CIS Secure brings decades of operational experience, deep technical expertise, and an unwavering commitment to customer missions.

Our teams operate across enterprise, tactical, and edge environments, delivering solutions that enable secure collaboration, resilient communications, and decision advantage in the most demanding conditions. When communication is critical and missions cannot wait, CIS Secure stands ready.
