

Trusted Calibration Services

Ensure that your equipment and instruments are operating with the precision you demand.

Calibration Services

Performance

Quality service and the fast turnaround time you need to maintain the highest standards.

Flexibility

At our facility or at yours, we give you the option to select the solution that works for you.

Confidence

As a manufacturer of cutting edge products ourselves, CIS Secure knows first hand what you expect and we make sure we deliver.

A Commitment to Precision

In the ever-evolving landscape of technology, accuracy and precision can mean the difference between success and failure in critical operations. Ensure that your equipment is operating as designed and maintain confidence in its performance with calibrations performed by CIS Secure's American Society for Quality (ASQ) certified calibration technicians.

CIS Secure's calibration service focuses on quality and fast turnarounds to minimize equipment downtime so you can make the well-informed decisions that are critical to achieving optimal output and personnel safety.

In industries such as Aerospace, Education Services, Manufacturing, R&D, and Defense, accuracy and precision are not just desirable traits—they are an absolute necessity. From satellite communications and lab equipment to the meter used to read your electrical panel, each instrument must perform within manufacturer guidelines as any deviation outside of tolerance can lead to costly, undesirable results.

CIS Secure's calibration technicians have the expertise to calibrate a wide range of equipment. They specialize in measurement science and maintain test equipment traceable to National Institute of Standards and Technology (NIST) or other recognized national metrology institute standards. Most industries operate under stringent regulations and guidelines to ensure equipment and product reliability and safety. CIS Secure calibration experts are driven by continued research, structured processes, and accreditation with ISO/IEC 17025 (in progress) to ensure we deliver the desired performance you demand.

Calibration is a key cog in the machinery of processes that ensure the quality and reliability of the equipment you use and the products and services they produce. Embracing this crucial aspect of equipment maintenance is not just an option, it is a responsibility, a commitment to precision, and a proactive approach that CIS Secure proudly delivers.
